

For Immediate Release

CDMS and ZEDX form a Technology and Market Alliance

Marysville, CA (January 22, 2008) – CDMS, Inc., and ZedX[®], Inc., today announced the formation of a technology and marketing agreement resulting in the combination of technology and services associated with CDMS' Advisor System and ZedX's AgFleet[®] product line. Under this agreement, CDMS and ZedX will integrate and incorporate components of their current and future information technologies into a single solution serving the various sectors of the agricultural industry.

"Technology consolidation, data integration, and transparency of information are essential to meeting the challenges facing all participants of the food production continuum," says Don L. Jackson, CDMS President. "As a developer of innovative solutions, ZedX provides leading edge technologies essential for agronomic management, and integrating AgFleet with CDMS' Advisor Decision Support System, will result in connecting all points of food and fiber production to facilitate decision making and value enhancement."

"CDMS has a rich heritage of over 20 years of bringing technology to the distribution, retail, manufacturing, and food production sectors of Agro-business," says Joe M. Russo, Ph.D., President of ZedX[®], Inc. "This Alliance will permit ZedX[®] to continue to focus on developing and bringing new innovations to market, and capitalize on the combination of technical and market expertise of CDMS to commercially apply these technologies in agriculture to lead information integration across the food production continuum," says Dr. Russo.

CDMS, Inc., provides data, information, and decision support technologies to the agro-business and food industries. CDMS serves markets throughout the U.S, Canada, and Central America. CDMS Services are utilized by a broad-range of market participants across the continuum of agro-business including product manufacturers, food production and processing, distribution, consultants, and growers.

ZedX[®], Inc.'s products and services enable effective resource management through a wide range of interactive, web-based, decision-support systems designed for the agricultural and energy sectors. These precision agriculture information and analytical tools assist dealers, consultants, and growers in making both long-term strategic as well as day-to-day management decisions.
